TITLE: Dual mode surface wave filter for high frequency applications -
has at least two filter units on piezo electrical substrate each of
which has two acoustic transducers between two reflectors

INVENTOR: BAIER, T; STRAUSS, G

PATENT-ASSIGNEE:

ABSTRACTED-PUB-NO: DE 19818038A
BASIC-ABSTRACT:

The filter can be operated either symmetrically or in an unbalanced
mode, and has at least two serial or parallel coupled filter units
(F1,F2) on a piezo electrical substrate. Each filter unit has at least
two acoustic transducers, between two reflectors (R), coupled to the
inputs and outputs (IN,OUT) of the filter.

At least two filter units, with at least one reflector between the
units, are arranged side-by-side in a first track inline arrangement.
The apertures of the filters are vertically arranged to the
propagation direction of the acoustic surface wave, and are arranged
on the same level. Preferably, the inputs of the two filter units of
the first track, and the outputs of the filter units, are coupled in
parallel.

USE - For high frequency applications.
